3.5. Working status Setup

LED Jumper : LED is on when it's connected and off when it's disconnected

PIR optional Jumper : PIR is available when connected (normal on) and unavailable when disconnected with only single iron Transducer is available

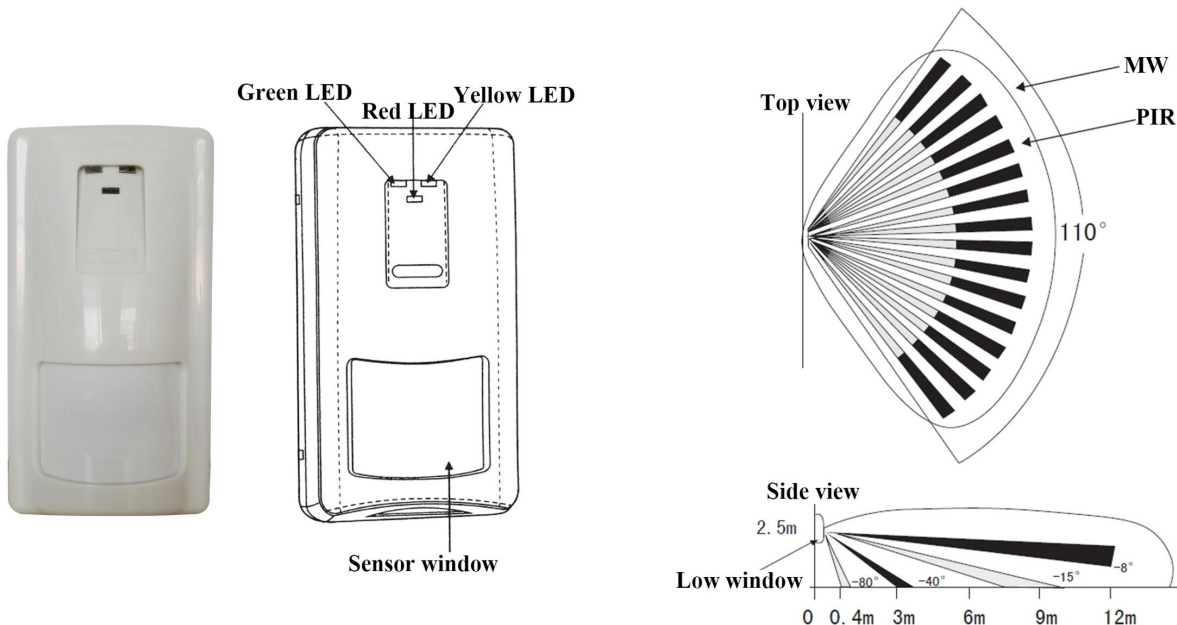

MW EN Microwave choose jumper : Microwave function effectively when connected, disconnected become single infrared microwave function is cancelled

PIR distance jump line : When connected 4 to 8 meters, detection range of 4 to 8 meters. When connected 6 to 12 meters, detection range of 6 to 12 meters. When connected 9 to 18 meters, detection range of 9 to 18 meters.

MPULSE counting jump line : The factory set up to 20. When the pulse number is 30 alarm response is slow, and detection range, strong anti-jamming capability, when the pulse number is 10 alarm response speed, anti-interference to weak, choosing to 30, should disconnect the LED jump line

MADI sensitivity adjustable : When the yellow light is on for 30s or microwave detector hyperterrorism MIN direction adjustment. When microwave detector adjusted distance is too close to the MAX

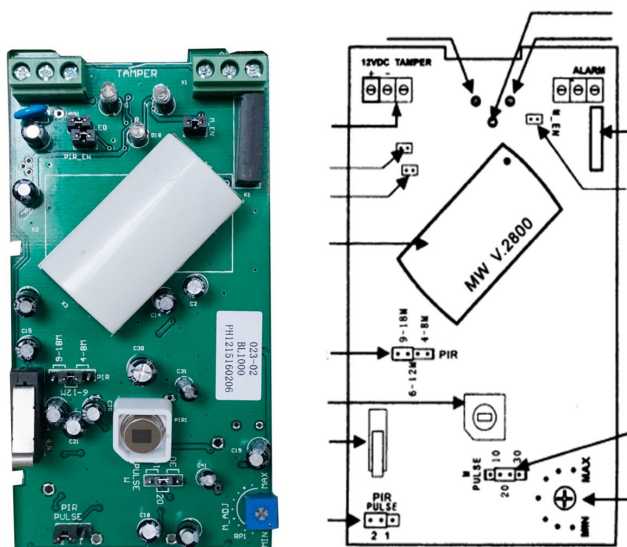

PIR PULSE JUMPER LINE: Connected position pulse counting 1 to 1, connected pulse counting at position 2 to 2 (factory Settings pulse counting to 2)
