

• Parameter

SMQT

Ang bilang ng mga rays	2/4/6/8/10
Distance (sa looban)	5M / 10m / 20M / 30M / 40m / 60m
taas detector	37/72/125/167 / 209 cm
operating kasalukuyang	30mA ~ 80mA
operating Boltahe	DC12V ~ DC18V
time feedback	& Amp; lt; 1.5ass
relay contact	3A, AC120V / DC24V
Ayusin ang anggulo	180° ± 90 °
room temperatura	-35 °C ~ 55 °C

• Introduction

SMQT

Ang kilusan detector kurtina dual infrared beam ay ginagamit na may window, pinto sa sistema ng alarma.

Ang sinag sensor bilang ang gawain sensor laser bakod.

With tamper resistant, anti interference, high reliability

With anti demolition, anti interference function, when there is an intruder to remove or damage, the immediate alarm model, the

Tamper switch, when the invaders destroyed or disassembled, tamper switch will trigger the alarm immediately bounce.

Waterproof moisture-proof function, can adapt to bad weather

Because this product is used in indoor and outdoor, the use of universal is relatively strong. The products according to the scientific design, with rain proof structure for installation of indoor and outdoor machine of supermarket zone, waterproof, dust-proof, wind and rain, wind and rain does not matter, can adapt to all kinds of bad environment and weather.

Aluminum alloy material design: beautiful and reliable structure

Main body outer shell is made of high quality aluminum alloy material, and the surface of the polishing treatment, bones and durable; the import filter to visible light good filtering function.

Installation and debugging is convenient, 3 when the warning distance can be adjusted

After the installation of the fixed infrared beam of the launch and reception of vision can be achieved 360 degrees of rotation, three block adjustable warning distance, convenient and sensitive.

The bracket adopts the latest sliding cover to be designed, and the installation is more convenient. Disassembly more secure.

3 warning distance adjustable map

far (15-30m)
in (5-15m)
near(0-5m)

Two Beams

Four Beams

Eight Beams

Ten Beams

Infrared Barrier

• Feature

SMQT

infrared fences (tinatawag ding "infrared" railings) ay isang uri ng mga aktibong infrared shooting, gamit ang multi-beam Infrared liwanag ng radio transmitter sa receiver sa "mababang dalas transmitter, Time Division Detection" mode emits infrared na ilaw, sa sandaling ang tao o ang bagay na ang mga bloke ng anumang katabi light beams sa dalawa o higit na inisyu ng transmitter ay lumampas 30ms, ang receiver output signal alarma agad kapag may mga maliliit na hayop o maliit bagay ang layo mula sa kung saan ang isang ray ng sikat ng araw, ang alarma ay hindi output signal alarma.
